

Consolidating different ECG devices and technologies AMICAS VERICIS™ for ECG management

A MICAS has more than 20 years of experience developing cardiology solutions that are designed to improve productivity and quality. AMICAS VERICIS is a leading-edge cardiology information management platform that tightly integrates data across the continuum of cardiovascular care.

VERICIS provides easy access to a sophisticated electrocardiogram management system through a tight integration with Epiphany. VERICIS' ECG management application provides a single interface to store, analyze, and report on a patient's ECG both inside and outside your hospital or healthcare network.

CHALLENGES WITH MULTIPLE TECHNOLOGIES

For hospitals and large health systems, challenges arise from the use of multiple vendor ECG cart technologies and other non-invasive modalities such as Holter and Stress. Some devices use a standard digital output, others use proprietary formats specific to the device manufacturer, while others are limited to paper print-outs. With all of these different devices presenting ECG information in different ways, there's no central vehicle for collecting and storing all the data.

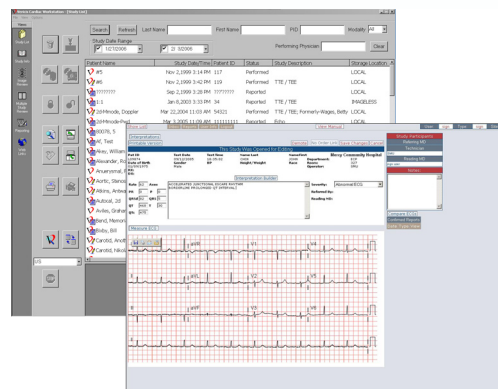

Because the format and availability of an ECG will vary depending on where a patient presents, cardiologists and other providers have a difficult time working with these diagnostic tests in a consistent, repeatable fashion. It's crucial for your organization to store, analyze, and report on ECG information - whether your patient is in the operating room, the cardiology department, the emergency department, or any other clinical area using ECG technology.

VERICIS ECG ADVANTAGES

VERICIS provides a single, Web-based visualization platform for viewing all non-invasive cardiology data along with your patient's additional imaging data and clinical reports. VERICIS integrates with many different ECG devices, which allows you to consolidate the storage and review of these exams into a single, centralized system. This means that cardiologists, emergency room physicians, anesthesiologists, and referring physicians have "anywhere access" to ECG information and your patient's complete cardiac file. Some advantages of VERICIS ECG management include:

- + Collecting, storing, and analyzing ECG information from over 60 different devices from more than 30 companies covering more than 10 cardio-pulmonary modalities.

VERICIS' integration with Epiphany for ECG management allows you to collect, store, and analyze ECG information from over 60 different devices.

VERICIS provides single-click access to a patient's ECG, which helps to consolidate the cardiac file.

- + Reducing costs by utilizing existing equipment and eliminating time-consuming, inefficient, paper-based processes.
- + Eliminating expensive long term support contracts from ECG vendors that provide proprietary ECG review stations.
- + Increasing efficiency by providing all doctors with central access to your patient's complete cardiac record and eliminating the need to go to multiple locations and review multiple ECG formats.
- + Reducing the amount of time for ECG review through an intuitive user interface that allows physicians to review stacks of ECGs quickly via a single-click "Confirm and Next" feature.

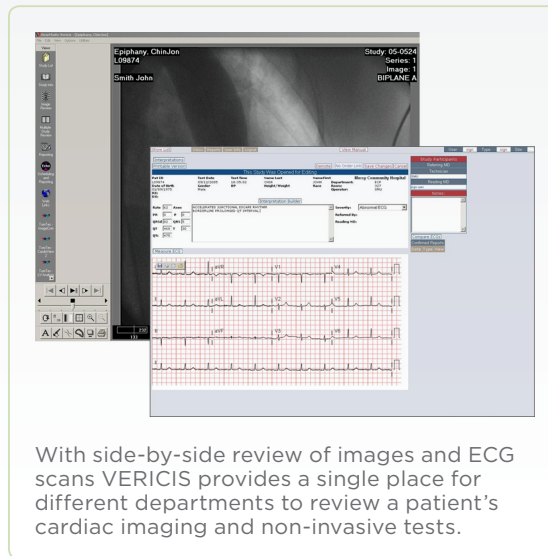

ECG BENEFITS BY ROLE

VERICIS provides a centralized place for storing ECGs and instantaneous "anywhere review," which provides value to the different specialties in your hospital or healthcare network. Some advantages of VERICIS ECG management include:

- + Reducing the amount of time it takes for emergency department physicians to review prior ECGs by providing instant access.
- + Increasing cardiologists' productivity and helping them comply with 24-hour read requirements by providing them with the capability to review ECGs from anywhere, including the office, the hospital, or their home.
- + Improving anesthesiology workflow by providing their doctors with instant ECG access – whether it's part of pre-op or they need to review a previous ECG.
- + Improving referring physician satisfaction and patient care by providing doctors with automatic e-mail notification when an ECG study is completed.

VERICIS ECG MANAGEMENT

VERICIS provides a single visualization platform for viewing all non-invasive cardiology data, along with your patient's additional imaging data and clinical reports. Because of this, VERICIS dramatically improves your facility's efficiency and provides cost savings related to managing your facility's various silos of ECG information. With a centralized location to review all cardiac information, VERICIS improves your doctors' efficiency and, ultimately, improves patient care.

With side-by-side review of images and ECG scans VERICIS provides a single place for different departments to review a patient's cardiac imaging and non-invasive tests.
