

AMICAS[®]

The **AMICAS/MEDITECH** Advantage

PACS working side-by-side with MEDITECH to help maximize your investment

While running a hospital can be complicated, choosing the right PACS partner can make things go a lot more smoothly.

If you're the CIO at your hospital, you're looking for an IT partner that works well with MEDITECH and you want to make sure that any new software solution works well with your existing IT infrastructure.

If you're a physician, you want to provide excellent patient care. In order to that, you want a PACS solution that provides you with the best features and access to images and other clinical data, regardless of your location – and you don't want to have to switch back and forth between software applications to view clinical information about your patient.

If you're running a Radiology Department, your focus is on managing workflow, limiting the number of user interfaces, creating a paperless process that can cut down on human error – all while managing ED discrepancies and communicating critical results to referring physicians.

And, at the end of the day, your goal is to provide excellent patient care – in the most efficient way possible.

WHY AMICAS?

AMICAS and MEDITECH have worked well together for many years – in fact, our offices are just a short drive away from each other. Over the course of these many years, we've developed a superior interface that ensures a seamless, repeatable PACS integration – and one that provides images,

workflow management, and radiology information throughout your hospital.

AMICAS has the tightest MEDITECH integration on the market.

What this means for your hospital is the strongest MEDITECH-focused value proposition for

overall affordability, unmatched functionality, complementary products, and a shared infrastructure.

To date, more than 70 customers representing over 100 facilities throughout the country have successfully integrated MEDITECH and AMICAS PACS.

UNIQUE CHALLENGES

You've already implemented a MEDITECH solution at your hospital. You're comfortable with how it works and realize how this solution enables everyone in the healthcare chain to deliver excellent patient care – from the Emergency Department to Orthopedics to Radiology.

Your challenge is to find an image management solution that complements and is fully integrated with MEDITECH.

A UNIQUE SOLUTION

With the tight integration of the AMICAS/ MEDITECH solution, your referring physicians can have enterprise access to diagnostic quality images through a fast, fully featured, easy-to-use image viewer – and all of this within the MEDITECH applications that they use daily, such as PCI, EMR, and EDM.

Your radiologists will have access to advanced clinical information from MEDITECH at their workstations. This means that, within a single view, they'll have all the information they need to provide timely and high-quality patient care.

And, since the AMICAS solution will complement your MEDITECH applications so well, your Radiology Department will have better visibility into where patients are in the imaging process. This means that your hospital will have optimal workflow both within the Radiology Department and in other image-centric departments, such as the Emergency Department, Orthopedics, and Neurology.

With AMICAS' innovative prioritization, workflow, and communication tools, your referring physicians will experience a quicker turnaround on their diagnostic imaging reports – especially critical findings – which will have a profound impact on patient care.

“We chose AMICAS because of their high quality products and unique relationship with MEDITECH. What impressed me was how the solutions and – more importantly, the people – work together seamlessly.”

Ken Bixel, vice president and CIO
Mount Nittany Medical Center (State College, PA)

And, best of all, with the AMICAS solution you'll be able to take full advantage of the IT infrastructure you've already put in place for MEDITECH.

HOW WE DO IT.

AMICAS is completely focused on customer success and innovation. One example of this is the Advanced Clinicals Exchange feature – which automatically shares clinical data such as MEDITECH'S Custom Defined Screen questionnaires or technologist notes with the radiologist via AMICAS PACS. This innovation was a direct result of listening to our MEDITECH customers and responding to their needs.

With Advanced Clinicals Exchange, you can eliminate the need for technologists to manually transfer information from one application to another or compel your radiologists to toggle back and forth between applications. With access to this vital clinical data, radiologists can be much more

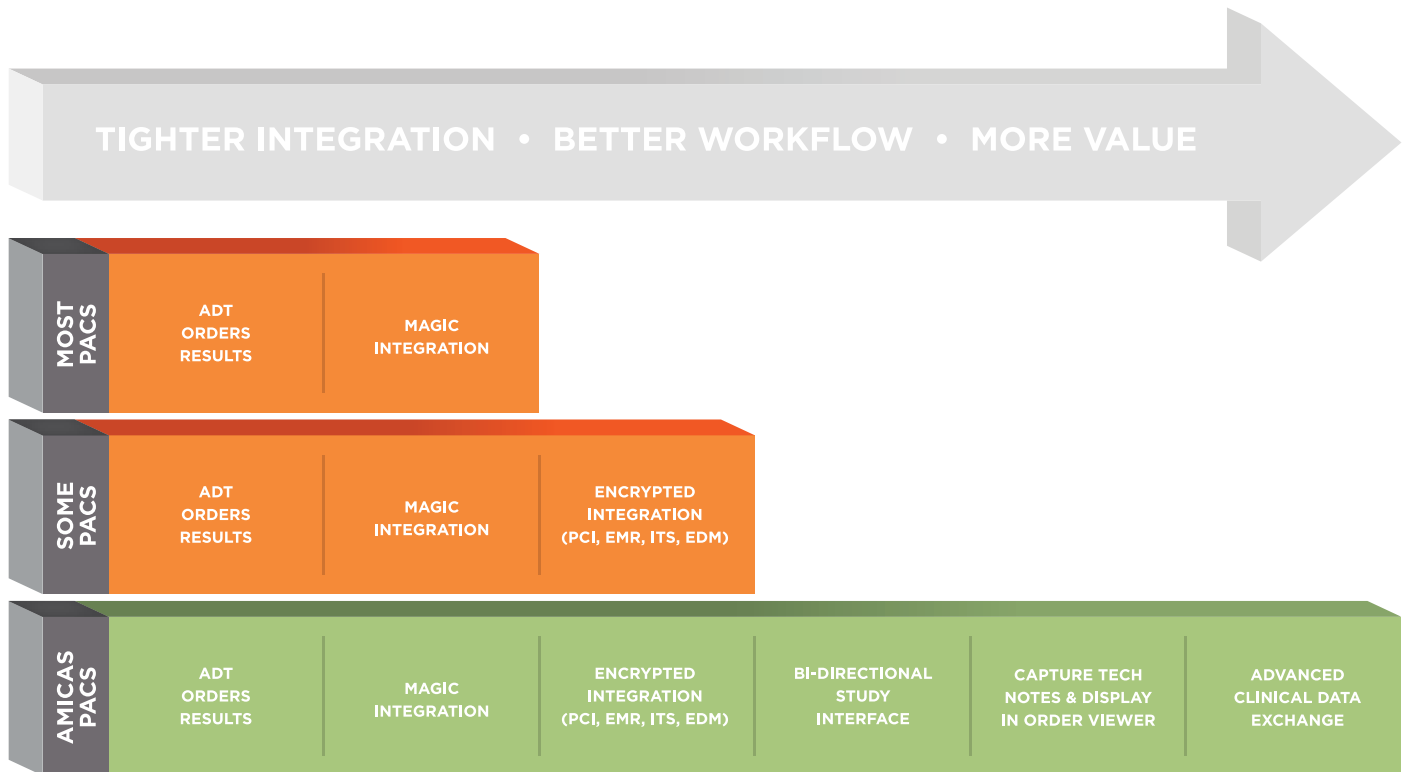

efficient in their diagnoses – which helps the entire hospital to provide excellent patient care.

“AMICAS PACS has revolutionized clinical effectiveness and patient care at ECMC.”

Eric C. Gregor MBA, RT, admin director of imaging services
Erie County Medical Center (Buffalo, NY)

THE AMICAS/MEDITECH ADVANTAGE

AMICAS has been in the business of developing, deploying, and supporting software solutions for radiology for more than 30 years. And we have a proven track record working with MEDITECH facilities – more than 100 to date. During every phase of the process, AMICAS and MEDITECH work in lock-step to ensure a smooth integration. Join us.

AMICAS is steps ahead.

AMICAS' tight integration with MEDITECH helps empower clinicians to provide better patient care. Tight integration, better workflow, more value, empowering clinicians, and better patient care. That's the AMICAS/MEDITECH advantage.

ASK YOURSELF

Are you looking for an imaging solution that works with
MEDITECH and your existing IT infrastructure?

Do you want the best features and access to images and
other clinical data - regardless of your physical location?

Do you want to maximize workflow in your Radiology
Department and other image-dependent departments?

Are you looking for proven success?

LET AMICAS HELP

Together with our customers, AMICAS
is revolutionizing radiology IT. Join us.
