

## Increasing collections and improving productivity AMICAS Financials™

**A**MICAS has decades of experience in radiology billing, so we understand the challenges you face every day in driving a successful billing operation. Because of intense economic and competitive pressures, your business must increase the quality of care and service you deliver to patients, while lowering operational costs.

AMICAS Financials creates a competitive advantage through reduced costs, streamlined operations, and compliance assistance – ultimately delivering increased productivity, cash flow, and patient satisfaction.

AMICAS Financials is a state-of-the-art, Windows-based platform designed specifically to enhance your workflow. Our .NET framework provides a user-centric, graphical navigation experience while providing feature-rich operational enhancements, which include added security, seamless communication with external sources – such as a hospital interface or a clearinghouse – and increased system performance.

With AMICAS Financials, you'll have proven core billing functionality, sophisticated claims editing, intrinsic document scanning and management, auto-coding, flexible management reporting, and real-time productivity monitoring – all in one, modern revenue cycle management system.

### BOOSTING PRODUCTIVITY AND COLLECTIONS

To minimize denials and ensure the highest possible claim acceptance rate for fast payment, AMICAS Financials incorporates multiple layers of automation. Our integrated, automated coding feature reduces manual charge-entry posting without monthly coding fees or outsourcing. This feature allows you to designate procedures – by location, carrier, date, modality, and place of service – for internal manual- or auto coding or for an external coding export.

Your payer collection efforts will go further with automated, built-in clean-claim coding technologies and CashFinder Worklists™ that automate the identification and prioritization of transactions in user-specific worklists for streamlined follow up.

AMICAS Financials also includes an integrated optical character recognition (OCR) technology that offers automated payment posting ability from paper EOBs. This technology facilitates denial management by automatically capturing denial codes and applying them to patient-specific accounts.

### FEATURES

#### Powerful productivity and collection tools available with AMICAS Financials include:

- + Keyless charge entry of paper and electronic reports
- + Intrinsic clinical and compliance edits
- + Batch insurance eligibility processing
- + Automated processing and posting of both paper and electronic EOBs
- + Web-based patient payment and electronic statement delivery
- + CPT and ICD-9 code translation
- + CashFinder Worklists for automated denial, patient, and payer follow up

## A HOLISTIC PERSPECTIVE ON REVENUE CYCLE MANAGEMENT

A world-class revenue cycle management system doesn't stop once the claim is submitted. Tracking and accelerating the time to receive payer and patient payments through their entire lifecycle is an essential component of running a successful practice or business.

AMICAS Payer Services™ and AMICAS Patient Services™, a suite of transactional services designed to accelerate the time it takes to convert receivables into cash while reducing the total cost of operations, complement the AMICAS Financials platform. Our network of transactions processes more than 100 million electronic claims, remittances, and patient statements per year – and provides access to more than 1,800 private payers and all government payers.

Together with AMICAS Payer Services and AMICAS Patient Services, AMICAS Financials provides automated batch eligibility and intrinsic clinical edits, which increases claim compliance and reduces claim denials, while boosting user productivity. Address cleansing technologies, return mail automation, and Web-based patient payments increase patient collections and satisfaction while operational overhead is reduced by eliminating the FTE hours associated with searching and updating patient addresses and posting patient payments.

## INTRINSIC DOCUMENT MANAGEMENT SOLUTION

AMICAS Financials features a paperless solution for billing departments. Our built-in document management solution allows you to capture any type of paper record – from charts and operator notes to EOBs and deposit tickets.

All scanned documents are automatically indexed to the patient level and are immediately made available for retrieval by end users. Key benefits of the intrinsic document scanning capabilities include real-time search and retrieval, user-defined indices and templates, comprehensive annotations (text, highlights, notes, and more), integrated HIPAA audit trail, and batch processing and print ability.

## EFFORTLESS REPORTING AND PRODUCTIVITY MONITORING

AMICAS Financials provides radiology practice administrators with reporting capabilities right from their desktops. Graphical illustrations display key financial performance indicators within seconds. This easy-to-read, customizable, and comprehensive display helps practice managers to improve both practice performance and efficiency.

## AMICAS FINANCIALS INCREASING COLLECTIONS AND IMPROVING PRODUCTIVITY

**“With AMICAS Financials’ automated technology, we have dramatically reduced denials, while increasing collections and achieving faster cash cycles.”**
