

## Streamlining report generation and distribution AMICAS VERICIS™ for clinical reporting

**A** MICAS has more than 20 years of experience developing cardiology solutions that are designed to improve productivity and quality. Deployed at many of the major cardiac institutions in the country, AMICAS' cardiology solutions have a proven track record of success.

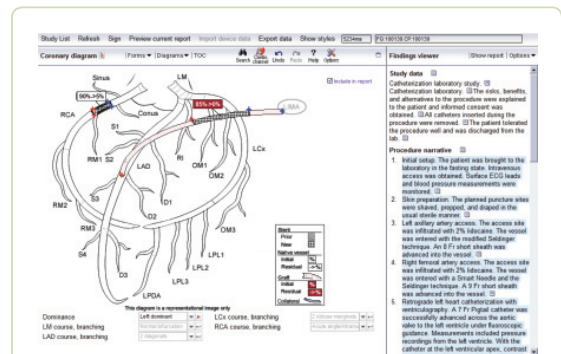

The VERICIS clinical reporting module improves the consistency and quality of reports, accelerates report distribution, and provides tools for knowledge management – all of which results in improved departmental performance and disease management. AMICAS' Web-based solution allows for complete image review, report generation, and signature – anywhere, and at any time.

### IMPROVE CONSISTENCY AND QUALITY

Designed in partnership with practicing cardiologists, VERICIS clinical reporting provides a structured yet flexible reporting methodology. In addition, by automatically consolidating information such as image measurements, hemodynamics data, and historical patient data, this module ensures a more complete and accurate report. With a common, Web-based user experience across all modalities, your cardiologists can read all of their exams and reports in a consistent, repeatable manner. Some key advantages of VERICIS clinical reporting include:

- + Complete sets of cerebral, coronary, and peripheral interactive anatomical diagrams, as well as “bull's eye” and wall motion diagrams that make it easier to report findings – and easier for referring physicians to understand reports.
- + An integrated, single view of current and historical patient information – including imaging, hemodynamic, and clinical results – which allows for the delivery of efficient, effective patient care.
- + The entire range of cardiovascular modalities are supported via specific modules for echocardiography, cardiac cath, peripheral vascular cath, vascular ultrasound, and nuclear cardiology. This reduces the need for your cardiologists to learn multiple reporting solutions.
- + 100 percent of the American College of Cardiology (ACC) data that's captured with the AMICAS Hemodynamics™ monitoring system, which facilitates accreditation and reduces costs associated with integrating this type of data into your cardiology reports.

The VERICIS clinical reporting module covers the entire range of cardiovascular modalities, which reduces the need for your cardiologists to learn multiple reporting solutions.

**Interactive coronary tree diagrams** are automatically pre-populated with cath lab data.

## ACCELERATE CARDIOLOGY REPORT DISTRIBUTION

With the total integration of the cardiac patient record in VERICIS clinical reporting, cardiologists can review their patient's images and create a report in a single session. By eliminating the time-consuming loop of dictation, transcription, editing, and review, report turnaround time can be reduced from days to minutes. Results are instantly available to physicians online and can be distributed in a variety of methods based on physician preference. Some key advantages of the distribution features of VERICIS clinical reporting include:

- + Reducing turnaround time, which can lead to improved time to treatment and length of stay for cardiac patients.
- + Improving communications between clinicians, which leads to higher satisfaction levels for staff and referring physicians.
- + Providing rich reports via EMR or fax with complete summary referral letters that include images and diagrams.

## IMPROVE DEPARTMENTAL PERFORMANCE

Many departments face the challenge of having cardiac patient information sitting in information silos – with no easy way to compile that information. With VERICIS clinical reporting, you can aggregate patient data across multiple departments, clinics, and offices. Administrators can analyze and solve problems from their desks rather than having to do time-consuming “chart pulls” to gather patient information. VERICIS clinical reporting provides the following advantages in this area:

- + Quickly generate statistical reports regarding clinical outcomes, which means physicians can provide more efficient diagnoses.
- + Develop disease management protocols based on the clinical effectiveness of therapies to improve patient care.
- + Benchmark your facility against national hospital norms via the ACC-NCDR CathPCI National Registry.

## IMPROVE QUALITY AND EFFICIENCY OF PATIENT CARE

The VERICIS clinical reporting module improves the consistency and quality of reports, accelerates report distribution, and provides tools for knowledge management to improve departmental performance and disease management. Use VERICIS clinical reporting to continue to improve patient outcomes, cardiologist and referring physician satisfaction, and departmental quality and efficiency.

Many **rich report formats** are available, including referring physician letters that include findings and intuitive diagrams that make it easier for referring physicians to understand the results.
